You may be wondering if your personal computer a laptop or a notebook? The answer is that they are not the same thing. There are differences. Generally speaking, portable notebook computers are viewed as smaller, lighter versions of the larger laptops. However, there are more differences to this. Let's explore them in greater detail. Background and History To understand the differences between laptops and notebooks, it's important to know some of the history behind both. Most computer historians point to the Osborne 1 (1981) from Osborne Computer Corp. as the first personal computer designed to be portable. At 24 pounds, calling it "portable" was truly a stretch. However, it did include a small screen, battery pack, floppy drives, and bundled software. But the computer never gained traction with the public. Two years later, Radio Shack came out with a much lighter (4 pounds) portable version of its Model 3 computer that most closely resembled a modern laptop as we know them today. The first known notebook computer was released by NEC in 1988, followed a year later portable, by Apple with its Macintosh Portable, which later evolved into the PowerBook. Portability What makes today's laptops and notebooks desirable is the ability to carry them and use them anywhere. Laptops are portable but come with a heavier battery, larger screens (10 to 18 inches), and more hardware within like a CD/DVD drive. That makes them generally weigh between 5 to 10 pounds. Notebooks tend to have smaller overall dimensions for both screens and keyboards, making them slimmer to carry and hold, and a general weight of less than 5 pounds. This size is preferred by students and consumers who only do light internet use or computing. DVD drives are usually not found on notebooks. Features Many computer users know that laptops contain more features than notebooks. A few of the laptop's basic features include: Full keyboard Powerful central processing unit (CPU) and cooling system Longer life battery DVD/CD drive Higher Video Graphics Array (VGA) screen In contrast, in exchange for its smaller size and lighter weight, the notebook's basic features are: Thinner than average laptops Lighter weight than laptops Enough power to do basic computing tasks Enough battery power Lower costs than average laptops Cost Notebooks, especially Google's Chromebook series, have dropped dramatically in price during the past few years. You can certainly find an operational Chromebook notebook for less than \$150 in 2020. Windows laptops, for example, are increasingly more expensive, often running \$500 and up for a higher-end laptop. This is why notebooks are enjoying a surge in popularity among students, seniors, and others. Costs are lower, portability is high, and the amount of functional computing is enough for most users. User Need The difference in notebooks and laptops usually comes down to differences in price, portability, and features. It's up to the user to know what is needed in a personal computer and what type of work for which it will be used. Knowing the particular needs will help to determine the level of laptop or notebook will be enough computer for one's uses. MORE FROM REFERENCE.COM By Richard Kalinowski i keyboard image by AGphotographer from Fotolia.com Asus offers a wide variety of laptops, ranging from affordable low-end models to somewhat pricey custom-built machines. If you can't afford to get a laptop custom built, you can customize a cheaper Asus laptop for a modest price tag. If you know how to customize your Asus laptop, you can actually end up with a unique looking, highly functional end result without spending hundreds of dollars on professional customization. Attach an external hard drive to your Asus laptop. One of the most important custom features that many consumers want is a custom, expansive storage drive for digital photos, music and videos. Luckily, you don't need to pay exorbitant amounts of money for a professional installation. Hard drives themselves are relatively inexpensive, but installation costs can be high, especially for laptops. An external USB hard drive costs around \$50 to \$100 and allows you to expand your Asus notebook's memory by simply plugging in the drive to any open USB port. Customize your keyboard with inexpensive vinyl character overlays. Many online retailers sell small vinyl stickers that let you add foreign characters to a standard Asus keyboard. Using the language settings available on the Windows operating system that comes standard with every Asus laptop, you can add extra characters to your keyboard and switch effortlessly between the two. This is much cheaper than purchasing a brand new, custom keyboard for your bilingual computing needs, often running \$15 or less. Additionally, you can also use vinyl overlays to simply add extra color or fonts to a standard English keyboard. Apply a vinyl skin to your laptop's exterior. A custom appearance is easy to obtain with a fresh skin, as explained by Best Laptop Gaming. You can get a professionally printed skin from a number of online retailers for upwards of \$10 (see Resources). You can also make your own skin. All you need is a piece of a printable, static cling vinyl. Static cling vinyl is available from most office supply stores. Just print a photo directly to the static cling and then cut it to fit your Asus laptop. Vinyl skins do not require adhesives and are removed easily, offering repeated customization opportunities. Use external devices to customize your laptop's functionality. Webcams, external mice and other accessories let you get more out of your Asus laptop. Most external devices work with simple USB connectivity, and many devices are available in compact sizes with small clips that let you attach them to your laptop.
